

Akuna Springs™, purely Australian

Our bodies are made up of between 50% and 70% water, and the brain is made up of 80% water. This water needs to be constantly replenished, with an active person needing approximately 8 glasses of water a day. If we did not constantly replace the water lost over the course of our active day, dehydration would set in, followed by headaches, tiredness and loss of concentration - and we may not have even felt thirsty!

To maintain good health and vitality, drink **AKUNA SPRINGS™** water with its crisp, fresh taste and unique balance of natural minerals. **AKUNA SPRINGS™** is PURE clean artesian water, free of all impurities, fresh and ready to drink with a 24 month shelf life.

NT Beverages Limited is a public, unlisted company that has built a bottled water plant facility at East Arm in the Northern Territory. An Artesian aquifer is located in Acacia Hills, 50km south of Darwin, N.T. This state of the art facility is HACCP certified and also has a full grey water system for internal sustainable use.
